Enterprise Mobility + Security

		E3	E5
Identity and access management	**Simplified access management and security** Centrally manage single sign-on across devices, your datacentre and the Cloud.	●	●
	Multi-factor authentication Strengthen sign-in authentication with verification options, including phone calls, text messages, or mobile app notifications, and use security monitoring to identify inconsistencies.	●	●
	Conditional access Define policies that provide contextual controls of the user, location, device, and app levels to allow, block, or challenge user access.	●	●
	Risk-based conditional access Protect apps and critical data in real time using machine learning and the Microsoft Intelligent Security Graph to block access when risk is detected.		●
	Advanced security reporting Monitor suspicious activity with reporting, auditing and alerts, and mitigate potential security issues using focussed recommendations.	●	●
	Privileged identify management Provide timely, on-demand administrative access to online services with access-related reporting and alerts.		●
	Windows Server Client Access Licence (CAL)* Provide each user access to server functions from multiple devices for a single fee.	●	●
Managed mobility productivity	**Mobile device management** Enroll corporate and personal devices to provision settings, enforce compliance, and protect your corporate data.	●	●
	Mobile application management Publish, configure, and update mobile apps on enrolled and unenrolled devices, and secure or remove opp-associated corporate data.	●	●
	Advanced Microsoft Office 365 data protection Extend management and security capabilities across users' devices, apps, and data, whilst preserving a rich, productive end-user experience.	●	●
	Integrated PC management Centralise management of PCs, laptops, and mobile devices from a single administrative console, and produce detailed hardware and software configuration reporting.	●	●
	Integrated on-premises management Extend your on-premises management to the Cloud from a single console with Microsoft System Center Configuration Manager and Microsoft System Center Endpoint Protection integration for enhanced PC, Mac, Urix/linux server, and mobile device administration.	●	●
Information protection	**Persistent data protection** Encrypt sensitive data and define usage rights for persistent protection regardless of where data is stored or shared.	●	●
	Intelligent data classification and labeling Configure policies to automatically classify and label data based on sensitivity and then apply persistent protection.		●
	Document tracking and revocation Monitor activities on shared data and revoke access in case of unexpected events.	●	●
	Encryption key management per regulatory needs Choose defaut key management options or deploy and manage your own keys to comply wth regulations.	●	●
Identity-driven security	**Microsoft Advanced Threat Analytics** Detect abnormal behaviour in on-premises systems and identify advanced targeted attacks and insider threats before they cause damage.	●	●
	Microsoft Cloud App Security Gain visibility, control, and protection for your cloud-based apps, while identifying threats, abnormal usage, and other cloud security issues.		●
