

Mako – GDPR Readiness Statement

Where is customer data held?

Data Centre locations:
Ashford (UK) and Las Vegas (US).

How is customer data protected?

All sensitive data is encrypted using AES at rest, and in the case of user passwords they are one-way hashed using bcrypt so are never reversible. All data is encrypted in transport. Additionally, our PCI DSS compliance requires a high degree of security and data protection and we conduct yearly PCI assessments to verify this.
